## Viega Advantix Vario: Millimetre precision. Unlimited flexibility.

**A great success – that's the long and the short of it** Viega Advantix Vario is the first shower channel that can be continuously shortened. It can be cut to the required length with millimetre precision and very little effort. It can then be fitted along the wall or anywhere in the room, in a straight line or around a corner. Viega Advantix therefore not only fulfils all of the installation requirements, it enables individual bathroom design – without compromise.

An overview of the advantages:

- award-winning design
- attractive colour variations
- boundless space for design
- replaces all special lengths from 30 to 280 cm
- simple, quick mounting
- adjustable installation height
- secure sealing concept
- height-adjustable grate
- self-cleaning drain
- drainage capacity up to 2.4 l/s
- comprehensive accessories

### Simple, quick mounting

Step 1: Shorten the channel base unit with a hacksaw and the cutting aid, deburr cut surfaces, apply sealing caps and screw tight.

Step 2: Determine construction height, shorten adjustment piece and attach drain set and support feet.

Step 3: Position the shower channel, connect to the drain pipe and secure feet. Finished.

### Secure sealing concept

A permanent and practical seal is the most important technical detail of a floor-level shower. With Advantix Vario, all of the materials required, such as special adhesive and sealing strip, are included in the scope of delivery.

### Height adjustable grate

Using the adjustable grate holder, the grate height can be adjusted exactly to various tile heights from 5 to 20 mm. If thicker floor coverings, e.g. natural stone, are used, the standing grate can be adjusted by 15 to 30 mm with help of an accessory set.

### Secure connection

Additional parts are available for corner, U-shaped or long variations. The interfaces, which touch the channels, have a special sealant on them, guaranteeing a permanent connection.

#### **Extreme length, variable height**

From an installation length of 80 cm upward, a second shower channel can double the drainage capacity. Straight versions are possible up to 280 cm, U-shaped and corner constructions are possible up to a length of 160 cm. Even in the flattest installation situation, the height difference between drain supports and the floor is still 2.5 cm. A norm-conformant 250 cm slope in the connection pipe can therefore be achieved without needing to lift the shower channel. Depending on the installation situation, the drainage capacity is between 0.4 and 0.8 l/s per drain.

#### **Self-cleaning drain**

Complete drainage without residue is achieved thanks to the minimal flow resistance and high flow rates of the specially constructed drain set. Even the basic unit of the Advantix Vario shower channel is extremely easy to clean: firstly, due to its narrow construction and secondly, due to the fact that it has nowhere where dirt can be trapped inside, because the corresponding standing grate does not require supporting feet.

#### **Award-winning design**

The fine stainless steel standing grates integrate harmoniously into any tile pattern. Additional design variations are created by the inclusion of tile border rails with a polished or matt surface. Advantix Vario has already received many design prizes for this.

#### **Unlimited space for design**

Be it especially long straight pieces, corner constructions or even U-shaped installations – the Viega Advantix Vario creates extra space and enables extraordinary bathroom design. Thanks to the new articles, such as connection, corner and end pieces, it can be fitted into any space without any problems.

#### **Attractive colour variations**

With a total of 4 colour variations, the Viega Advantix Vario integrates harmoniously into any bathroom design. Alongside matt and shiny stainless steel, black and white versions are now available – for more colour harmony in the bathroom.
